

RubyMine 5
The Cutting-Edge Ruby on Rails IDE

“Using RubyMine allows us to develop using a common tool making it easier to pair and help each other out without having to lose productivity due to the context switching from one development environment (platform) to another.”

Jeremy Anderson,
agile software developer at
Pillar Technology

Key Facts

RubyMine is a dedicated Ruby and Rails development environment. The IDE provides a wide range of essential tools for Ruby developers, tightly integrated together to create a convenient environment for productive Ruby development and Web development with Ruby on Rails.

Key Benefits

One of RubyMine's key advantages is its deep understanding of the Ruby language's specifics, its dynamic nature, and code conventions. RubyMine performs a comprehensive analysis of project code and offers developers best-in-class code insight and code completion suggestions that no other Ruby/Rails IDE does. Based on its knowledge of the internals of the Rails framework, RubyMine provides a range of effective Rails-aware refactorings, which greatly simplifies making changes to the code.

JetBrains' flagship product, IntelliJ IDEA, has always been highly praised for its web development capabilities, such as great HTML, CSS and JavaScript editing support. RubyMine builds upon these capabilities with its own amazing features for Ruby and Rails developers. Its web-authoring strengths are a great match for an easier and more productive web development with Ruby on Rails.

Key Features

- Support for Ruby up to 2.x and Rails 3.x
- Smart Ruby and Rails Code Completion
- Rails-aware Code Refactorings
- On-the-fly Code Analysis and Error Highlighting
- Ruby and Rails-specific Code Inspections with Intelligent Quick-Fixes
- Automatic Code Formatting and Styling
- Excellent facilities for development with JavaScript/CoffeeScript, HTML/HAML, CSS/SASS/LESS
- Version Control Integrations: Subversion, Git, Mercurial, Perforce, CVS
- Unit Testing Frameworks Support with Integrated Test Runner UI
- Ruby Debugger with Breakpoints in Rails or RubyMotion Code
- JavaScript/CoffeeScript Debugger

System Requirements

Intel Pentium III or compatible @800 MHz or faster
1 GB RAM minimum
2 GB RAM recommended
300 MB hard disk space + at least 200 MB for caches
Ruby SDK version 1.8.x or higher
