Protect Microsoft Office 365® Mailboxes with Acronis Backup 12

The Challenges of Protecting Office 365

Microsoft Office 365 is rapidly becoming the email of choice for small companies. More than 70 million business users rely on Office 365, according to Microsoft. By 2018, the number of users is predicted to grow to 155 million — a 49 percent Compounded Annual Growth Rate (CAGR).

It is important that you protect all your business data from loss and disasters, yet some IT departments do not implement a backup strategy for their Office 365 mailboxes. Thus, it is no surprise that up to 80 percent of companies have already experienced data loss in the cloud.

While Office 365 includes basic protection, it may not satisfy regulatory requirements or meet your business continuity strategy needs. Moreover, it does not meet the best business backup policy: the 3-2-1 strategy — store your data in three places, on two types of storage, with one copy stored off-site.

Perhaps you know you need to further protect your Office 365 mail, but lack the resources to implement and manage multiple backup solutions for different parts of your IT structure. This is how Acronis can help.

Acronis Backup 12 Protects Office 365

Acronis Backup 12 is the only data protection solution on the market that provides complete protection of your entire IT infrastructure by backing up Office 365 emails, other cloud environments, as well as on-premise physical and virtual systems.

In addition to Office 365, you can protect your entire Microsoft® stack, including Microsoft Azure® workloads, your virtual Microsoft Hyper-V® hosts and virtual machines (VMs), your physical Windows® servers, Windows PCs, and business applications, such as SQL Server®, SharePoint®, Active Directory®, and Exchange. Moreover, you can also protect VMware vSphere®, Linux Mac®, Amazon® EC2 instances, iPhone®, iPad®, Android® devices, and more.

Acronis gives you ultimate control of your IT environment — backup for your physical, virtual and cloud infrastructure, flexible backup destinations, and numerous quick recovery options.

EASY TO BACK UP AND RECOVER

Reduce complexity and control your data using a flexible cloud or local web console.

Achieve target RPOs and RTOs with quick backup and recovery of cloud systems and applications in any location.

Rely on trusted technologies designed for your current and future environments.

Retain complete control over the location of your data, systems, and backups; always know where your company data is even when it is stored in the cloud.

HOW IT WORKS

Lightweight Agent

Protecting your Microsoft Office 365 emails is easy: simply install an agent on any of your physical, virtual, or cloud Windows systems and connect it to your Office 365 administrative account. You will see all your email accounts in Acronis Backup's touch-friendly console.

Fast and Flexible Backup

Schedule your backup to any storage: on-premise local storage, network storage (NAS/SAN), or the secure Acronis Cloud Storage. Multi-stream backup ensures maximum performance and fast results.

Search and Preview

Search emails by subject, sender, recipient, and date ranges, before you recover the backup. You can also preview an email before you recover to make sure it is exactly what you need.

Easy Recovery

Recover entire mailboxes to the same mailbox or a different one. Recover individual emails, calendar items, tasks, or contacts — sending them as an email, or restoring a copy to the original mailbox or a different one.

SYSTEM REQUIREMENTS

Supported Microsoft Windows for Office 365 Agent

- Windows Server 2016
- Windows Server 2012/2012 R2, 2008/2008 R2 (x64)
- Windows Small Business Server 2011, 2008 (x64)
- Windows Storage Server 2012/2012 R2, 2008/2008 R2 (x64)
- Windows 10, 8/8.1 (x64)
